

条件语句

C-3 创建: 张林伟, 最后修改: 张林伟 2018-09-14 11:04

if、choose-when-otherwise

代码块XML

```
1 <select id="findActiveBlogWithTitleLike"
2     resultType="Blog">
3     SELECT * FROM BLOG
4     WHERE state = 'ACTIVE'
5     <if test="title != null">
6         AND title like #{title}
7     </if>
8 </select>
```

代码块XML

```
1 <select id="countConflictInfos"
2     parameterType="com.meituan.service.mobile.audit.common.request.RatioUpdateConflictInfoRequest" resultType="java.lang.Integer">
3     select count(*) from base_ratio_info where
4     <choose>
5         <when test="request.regionId == null">
6             region_id is #{request.regionId} and
7         </when>
8         <otherwise>
9             region_id = #{request.regionId} and
10        </otherwise>
11    </choose>
12    <choose>
13        <when test="request.provinceId == null">
14            province_id is #{request.provinceId} and
15        </when>
16        <otherwise>
17            province_id = #{request.provinceId} and
18        </otherwise>
19    </choose>
20    is_del = 0
21 </select>
```

ps.这里 request 的成员变量为私有，mapper 中仍使用 request.provinceId 获取而不是使用 getter。
